***Drawings***

1. The drawings were received on 26 June 2008. These drawings are approved.
2. Figures 1-2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Applicant has added a legend of "Related Art" to Figures 1-2. However, this label should be replaced with the legend --Prior Art-- for the reasons set forth above, given the fact that the legend of "Related Art" could be construed to mean that drawing figures labeled as such show various embodiments of the instant invention instead of previous inventions.

***Claim Rejections - 35 USC § 103***

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Art Unit: 3617

4. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over laid open Japanese Utility Model 56-95983 in view of Satzler. The laid open reference 56-95983 shows an endless track having an adjustment mechanism located on a roller wheel 7 having all of the limitations as set forth in the claims, except for the following:

The laid open reference 56-95983 does not show the adjustment mechanism located on the roller wheel (unlabelled) located closest to the drive wheel 1. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the adjustment mechanism on any or all of the rolling wheels, for the purpose of preventing the track from coming off of the wheels during use (i.e. while cornering), and to reduce wear on all components during changes of direction (which would reduce maintenance costs).

The laid open reference 56-95983 also does not show an adjustment mechanism located on the idler wheel. Satzler teaches the use of an adjustment mechanism 38 located on an idler wheel 26. This adjustment mechanism 38 of Satzler meets all of the limitations of claim 4. Therefore from this teaching, it would have been obvious to one of ordinary skill in the art at the time of the invention to provide the idler wheel of the laid open reference 56-95983 with an adjustment mechanism in order to prevent the endless track from becoming misaligned, which would prevent damage to the track and wheel assemblies, thus reducing maintenance costs.

***Response to Arguments***

5. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

6. Applicant's arguments filed 26 June 2008 have been fully considered but they are not persuasive. The Applicant argues that no reasoning was given for how the laid open reference 56-95983 meets the limitations of claim 2. However, it should be noted that this is not the case, as sufficient motivation was provided in the rejection (see paragraph 2 of section 4 above, which is a repeat of the original rejection of the previous office action).

***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3617

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
